PROFILE

B.Tech Computer Science student with hands-on experience in Python, data analytics, machine learning, and computer vision. Built academic projects involving data processing, classification, YOLO-based person detection, emotion analysis, and dashboards. Looking to apply analytical and development skills in a data analyst / Python role.

PROJECTS

AI-Powered Classroom Engagement System

Python • Flask • YOLOv8 • Computer Vision • TensorFlow/Keras • MongoDB

- Developed a classroom video-analysis system to detect people and estimate engagement using computer vision.
- Integrated YOLOv8 person detection with emotion recognition and eye-state/drowsiness analysis for recorded videos and classroom camera feeds.
- Built Flask backend endpoints for video streaming and analysis results, with MongoDB used for storing project data.

Phishing URL Detection System

Python • Machine Learning • Feature Extraction

- Built a machine learning system to classify URLs as legitimate or malicious using URL feature extraction.
- Applied data preprocessing, model training, testing, and optimization to improve phishing detection performance.

Fake News Detection System

Python • NLP • Text Classification

- Built a text-classification model to identify fake news articles using NLP-based preprocessing.
- Trained and evaluated the model to produce reliable classification results.
